SUMMARY

Associate Product Manager driving product strategy and delivery for **TeachOS**, NxtWave's LLM-powered instructor platform (**26K+ AI evaluations/month, 600+ instructors, 50+ institutes**). Build and ship AI products end to end: **LLM evaluation**, roadmaps and PRDs, Metabase/BigQuery analytics and fast prototyping with **Claude, ChatGPT, Groq API, Lovable and Replit**.

EXPERIENCE

NxtWave
Associate Product Manager — *Jun 2026 – Present*
Associate Product Manager Intern — *May 2025 – Jun 2026*

- Own **product strategy, roadmap and end-to-end delivery** of **TeachOS** (formerly Instructor Platform), NxtWave's AI instructor platform; scaled it from a 6-instructor QA pilot to **26K+ LLM-powered evaluations/month** for **600+ instructors across 51 institutes** (~2× since Oct 2025), shipping 450+ tasks in weekly sprints and deliberately dropping 60+ low-impact ones after evaluation to protect engineering time.
- Raised **evaluation completion from 84% to 98%** and external-mic usage from 8% to 32% by rebuilding session recording (offline-safe, auto-resume, mic detection); auto-resume rescued **3,900+ recordings** and sessions flagged as critically low quality fell from 17% to 3%.
- Redesigned QA reports from an audit into coaching (Session Snapshot, top-3 **Action Playbooks**, deltas, timestamped audio), lifting **report open rate from 61% to 85%** and monthly reports opened from ~9.7K to 21K+.
- Launched the preparation layer (Pre-Lecture Readiness gate, **AI Assessment**, demo lectures, Misconceptions tab): lectures with a demo rose **from under 2% to 40%**; same-instructor QA scores improved **+0.2/10**, with 67% of 300+ instructors scoring higher when prepared.
- Designed and built **Manager Connect** in **Replit** (1:1 scheduling, transcripts, AI session report, action-item sync): **3,000+ manager–instructor 1:1s** for 500+ instructors by 17 managers; monthly 1:1s grew **from ~55 to ~1,000**.
- Improved **LLM evaluation quality**: subject-specific rubrics, a gold-standard **LLM evaluation** set and **root cause analysis (RCA)** on failures; migrated models as they were deprecated (**GPT-5, Gemini Flash**) and benchmarked existing models to improve report quality while keeping cost per evaluation efficient; **203K+ evaluations** and 84K+ hours of classroom audio processed at 96–99% monthly completion.
- Drove **data-driven product decisions** using **Metabase/BigQuery with Claude-assisted analysis**, instructor interviews at 3 campuses and **KPI** definition; a recording-gap RCA showed 25 instructors caused 45% of missed recordings, shifting the fix from infrastructure to product and compliance. Directed the data team on **210+ analytics tasks** (scorecards, dashboards).
- Built 45+ prototypes (20+ in **Lovable**, 15 in **Replit**, 10+ interactive **HTML**), including a full TeachOS clone, and a **video-analysis POC** to validate ideas before engineering invested; launched **Zoho ticketing** (2,100+ issues/month raised in-product).
- Led the attendance shift from paper and pen (~10 min/class) to photo-based (~5 min) to **QR attendance (~2 min)**, rolled out across 4 campuses with campus operations teams; each step also made attendance more authentic and harder to fake.

Diebold Nixdorf
Development Intern — *Jan 2024 – Jul 2024*

- Contributed to the Vista Terminal Application, aligning product functionality with market goals, business requirements and user needs; collaborated across teams to resolve bugs and improve performance and reliability.
- Conducted root cause analysis on recurring issues and recommended fixes that enhanced product stability and user experience.

Mahindra First Choice Wheels Ltd.
SDC Intern — *May 2023 – Jul 2023*

- Analyzed the vehicle reselling platform to map business processes and user journeys, identifying opportunities for product improvement.
- Supported workflow and user experience enhancements and aligned technical solutions with business goals through end-to-end product discussions with stakeholders.

PROJECTS

AdCraft AI
Live MVP | Demo | Pitch deck | GitHub — *IIIT-H Final Year Project, 2026*

- Co-developed end-to-end product (user research → **Lovable** MVP → pitch) of an **AI listing and marketing tool** for India's 1.8 Cr maker-sellers: one photo generates titles, descriptions, Instagram/WhatsApp copy and Amazon/Flipkart/Meesho listings in ~90 seconds, with UTM-tracked shareable links, scheduling and Hindi/English **voice mode**.
- Validated with 10 maker-sellers (10/10 assumption categories validated; 8/10 first-session users committed to pay ₹199/month); defined pricing tiers, market sizing and go-to-market plan.
- Grounded **LLM generation** in MAdVerse, IIIT-H's multilingual Indian ad dataset; designed and evaluated multi-step **AI workflows** with metrics for output quality, engagement and generation success rate, and iterated on workflow logic to cut low-quality outputs.

IIIT-H Marketplace

- Conceptualized a marketplace for IIIT Hyderabad students to replace cluttered WhatsApp buying and selling groups, adding **campus delivery requests** and **direct seller QR payments** to avoid gateway fees on low-value transactions.

EDUCATION

INTERNATIONAL INSTITUTE OF INFORMATION TECHNOLOGY HYDERABAD (IIIT-H) — *Jul 2024 – Jul 2026*
Masters of Technology, Product Design and Management — Cumulative GPA: 8.04 / 10

NARSEE MONJEE INSTITUTE OF MANAGEMENT STUDIES (NMIMS), SHIRPUR — *Aug 2020 – Jun 2024*
Bachelor of Technology, Computer Engineering (MPSTME) — Cumulative GPA: 3.25 / 4.0

SKILLS

AI & LLM: Generative AI, LLMs, LLM Evaluation, Claude, ChatGPT, GPT models, Groq API, Gemini
AI Prototyping: Lovable, Replit, Vibe Coding, POCs, Rapid Prototyping, Figma, n8n
Product: Product Strategy, Roadmapping, PRDs & User Stories, Prioritization, User Research, Stakeholder Management, Agile/Scrum, Go-to-Market, Root Cause Analysis, KPI & Metrics Definition, Cloud-native SaaS
Data & Tools: AI-assisted Data Analysis, Python, Metabase, BigQuery, Google Analytics, Hex, Jira, ClickUp, Confluence, Git/GitHub, APIs
